

After additional research and planning, the costings for the creation of an unusual mana sinecure that uses the Summer cutting are available. The sinecure will require a commission to create as normal, but this project does fall under the remit of the commission available to the Arcane Architect.

The costings are 3 wains of white granite and 3 wains of weirwood, along with 12 crowns of labour costs and additional materials, and of course the cutting itself. This will create a small orchard of trees producing 4 golden apples for harvest by the sinecure holder each season.

*OOO Note: For any further queries relating to the creation of this sinecure, please contact the Plot team.*
