

To Fintan Nighthaven of Holt, Holtford, Miaren,

It is a pleasure to receive your message, and I am glad to find a like-minded citizen of the Empire. Our chat was very productive, and I think it would benefit both of us to continue to meet, as I likewise would see trade continuing between our peoples.

However, I am concerned about your suggestion that Yellow Lotus is in any way harmful; as I'm sure you remember, it is a superior product extracted from only the highest-quality flowers found deep in the Vioskuma swamps, and as a result is free of impurities, whether added or otherwise. I've not heard of 'Bite', and it sounds unpleasant, but I can assure you that your sources are clearly inaccurate. This 'Bite' is not an ingredient of Yellow Lotus, and it would be disappointing if the trade of Yellow Lotus were to be interdicted based on this quite untrue information. I would suggest, in the future, that you speak with myself or my associates regarding any potential issues with my products, and I will be pleased to put any other concerned parties' minds to rest on the issue next time we meet at Anvil.

I know that you are undoubtedly better-versed in Imperial law than I am, and are in a position to make the right enquiries at the right time. As I said above, I think that we could both benefit from continued trade; should you find yourself in need of personal remuneration to ensure that trade can continue, I am certain that we can come to some kind of agreement between ourselves. I'm sure you understand that the smaller the circle of trust in business, the greater the benefits for all.

Lastly, we spoke briefly about Bone Dust; I have managed to procure a small number of doses, and I can bring them to the upcoming summit. I will be at the Forge as usual at around the same time as before, and you can either purchase these doses yourself or inform your own interested parties where they can find me.

I do hope all is well with you,

Evander
